CASE NARRATIVE

Laboratory number:	**179603**
Client:	**Mactec, Inc.**
Project:	**57255 001 22**
Location:	**Presidio / Baker Beach**
Request Date:	**05/24/05**
Samples Received:	**05/24/05**

This hardcopy data package contains sample and QC results for one soil sample, requested for the above referenced project on 05/24/05. The sample was received intact.

Volatile Organics by GC/MS (EPA 8260B):
Matrix spikes were not reported for batch 102317 because the parent sample required reanalysis in another batch. The spike recoveries in the LCS were within criteria. Low response was observed for bromomethane in the ICV analyzed 05/18/05 19:12; this analyte was not detected at or above the RL in the associated samples. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
Low response was observed for benzo(k)fluoranthene in the CCV analyzed 06/03/05 21:14; this analyte met minimum response criteria. High recovery was observed for pyrene in the MSD for batch 102619; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. No other analytical problems were encountered.

Pesticides (EPA 8081A):
High responses were observed for a number of analytes in the CCV analyzed 06/02/05 11:39; average CCV drift met method requirements. High responses were observed for 4,4'-DDD and methoxychlor in the CCV analyzed 06/02/05 22:29 and the CCV analyzed 06/04/05 00:29; average CCV drift met method requirements, and these analytes were not detected at or above the RL in the associated samples. Low responses were observed for gamma-BHC and 4,4'-DDT in the CCV analyzed 06/04/05 07:53 and the CCV analyzed 06/06/05 16:43; average CCV drift met method requirements. BBSB106(0.5) (lab # 179603-001) was diluted due to the dark, viscous nature of the sample extract. No other analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6020 and EPA 7471A):
Low recoveries were observed for chromium and nickel in the MS of BBSB106(0.5) (lab # 179603-001); the BS/BSD were within limits, and the associated RPDs were within limits. These analytes were low outside criteria in the post digestion spike. Responses exceeding the instrument's linear range were observed for barium and zinc in the MS/MSD of BBSB106(0.5) (lab # 179603-001). High % difference was observed for molybdenum in the serial dilution of BBSB106(0.5) (lab # 179603-001). Zinc was detected between the

Metals (EPA 6020 and EPA 7471A):

MDL and the RL in the method blank for batch 102337; this analyte was detected in the sample at a level at least ten times that of the blank. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):

No analytical problems were encountered.

☑ Extracts were cleaned up using Florisil cartridges
Florisil cartridges/ columns rinsed 3x with Hexane
Extracts were eluted with 90 mL 9:1 Hexane/Acetone
Concentrated to volumes as noted above

Sand weighed out for QC samples

Samples were dried with baked, CH_2Cl_2-rinsed granular Na_2SO_4 RW

1.0 mL of surrogate solution was added to all samples

1.0 mL of matrix spiking solution was added to all spikes

≥100mL 1:1 CH_2Cl_2:Acetone was added to all:

Samples were: ☑ sonicated 3 times ☐ soxhlet extractors on at: soxhlets off at:

Extracts filtered through baked, CH_2Cl_2-rinsed powdered Na_2SO_4 TERRA

Concentrated: ☑ to volumes as noted above ☐ to clean-up volume

Clean-up (if necessary): ☐ GPC (see GPC run log) ☐ Silica Gel

Concentrated to final volumes as noted above

CASE NARRATIVE

Laboratory number:	**179714**
Client:	**Mactec, Inc.**
Project:	**57255 001 22**
Location:	**Presidio / Baker Beach**
Request Date:	**05/27/05**
Samples Received:	**05/27/05**

This hardcopy data package contains sample and QC results for two water samples, requested for the above referenced project on 05/27/05. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 102440; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
Matrix spikes were not performed for this analysis due to insufficient sample volume. Low responses were observed for bromomethane, Freon 113, and Freon 12 in the ICV analyzed 05/20/05 12:39; these analytes were not detected at or above the RL in the associated samples. High response was observed for 2,2-dichloropropane; this analyte was not detected at or above the RL in the associated samples. Low response was observed for 2,2-dichloropropane in the CCV analyzed 06/01/05 09:42; this analyte met minimum response criteria. Naphthalene was detected above the RL in the method blank for batch 102513; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
High responses were observed for a number of analytes in the ICV analyzed 06/05/05 12:04; affected data was qualified with "b". High response was observed for benzo(k)fluoranthene in the CCV analyzed 06/06/05 20:16; this analyte was not detected at or above the RL in the associated samples. Low recovery was observed for pyrene in the MS for batch 102631; the parent sample was not a project sample, and the LCS was within limits. High RPD was also observed for pyrene in the MS/MSD for batch 102631; this analyte was not detected at or above the RL in the associated sample. Low recoveries were observed for pyrene in the MS/MSD for batch 102631, due to matrix interference; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. A number of analytes were detected between the MDL and the RL in the method blank for batch 102631; these analytes were not detected in the sample at or above the RL. No other analytical problems were encountered.

Curtis & Tompkins, Ltd.

CASE NARRATIVE

Laboratory number:	**179714**
Client:	**Mactec, Inc.**
Project:	**57255 001 22**
Location:	**Presidio / Baker Beach**
Request Date:	**05/27/05**
Samples Received:	**05/27/05**

Pesticides (EPA 8081A):
High response was observed for methoxychlor in the ICV analyzed 06/07/05 05:04; average ICV drift met method requirements, and this analyte was not detected at or above the RL in the associated sample. High surrogate recovery was observed for TCMX in the MSD for batch 102456; the corresponding decachlorobiphenyl surrogate recovery was within limits, and the parent sample was not a project sample. Delta-BHC was detected between the MDL and the RL in the method blank for batch 102456; this analyte was not detected in the sample at or above the RL. No other analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6020 and EPA 7470A):
Molybdenum was detected between the MDL and the RL in the method blank for batch 102706; this analyte was not detected in the sample at or above the RL. No other analytical problems were encountered.

Dioxins and Furans (EPA 8290):
Eno River Labs, LLC in Durham, NC performed the analysis. Please see the Eno River Labs, LLC case narrative.

COOLER RECEIPT CHECKLIST

Login#: 179714 Date Received: 5-27-05 Number of Coolers: 1
Client: Machec Project: Baker Beach

A. Preliminary Examination Phase
Date Opened: 5-27-05 By (print): Troy Windsor (sign) Troy Windsor

1. Did cooler come with a shipping slip (airbill, etc.)? ..... YES (NO)
   If YES, enter carrier name and airbill number: _____
2. Were custody seals on outside of cooler? ..... YES (NO)
   How many and where? _____ Seal date: _____ Seal name: _____
3. Were custody seals unbroken and intact at the date and time of arrival? ..... YES NO N/A
4. Were custody papers dry and intact when received? ..... (YES) NO
5. Were custody papers filled out properly (ink, signed, etc.)? ..... (YES) NO
6. Did you sign the custody papers in the appropriate place? ..... (YES) NO
7. Was project identifiable from custody papers? ..... (YES) NO
   If YES, enter project name at the top of this form.
8. If required, was sufficient ice used? Samples should be 2-6 degrees C. ..... (YES) NO
   Type of ice: Wet Temperature: 4.3

B. Login Phase
Date Logged In: 5-27-05 By (print): Troy Windsor (sign) Troy Windsor

1. Describe type of packing in cooler: Bubblewrap
2. Did all bottles arrive unbroken? ..... (YES) NO
3. Were labels in good condition and complete (ID, date, time, signature, etc.)? ... (YES) NO
4. Did bottle labels agree with custody papers? ..... (YES) NO
5. Were appropriate containers used for the tests indicated? ..... (YES) NO
6. Were correct preservatives added to samples? ..... (YES) NO
7. Was sufficient amount of sample sent for tests indicated? ..... (YES) NO
8. Were bubbles absent in VOA samples? If NO, list sample Ids below ..... (YES) NO
9. Was the client contacted concerning this sample delivery? ..... YES NO
   If YES, give details below.
   Who was called? _____ By whom? _____ Date: _____

TPH-EXTRACTABLE HYDROCARBONS IN WATER

Curtis & Tompkins, Ltd.

Total Extractable Hydrocarbons

Lab #:	179714	Location:	Presidio / Baker Beach
Client:	Mactec, Inc.	Prep:	EPA 3520C
Project#:	57255 001 22	Analysis:	EPA 8015B
Field ID:	BBIPZ101	Sampled:	05/27/05
Matrix:	Water	Received:	05/27/05
Units:	ug/L	Prepared:	06/07/05
Diln Fac:	1.000	Analyzed:	06/08/05
Batch#:	102734		

Type: SAMPLE Cleanup Method: EPA 3630C
Lab ID: 179714-001

Analyte	Result	RL	MDL
Diesel C10-C24	31 J Y	50	21
Motor Oil C24-C36	58 J Y	300	42

Surrogate	%REC	Limits
Hexacosane	108	55-143

Type: BLANK Cleanup Method: EPA 3630C
Lab ID: QC296607

Analyte	Result	RL	MDL
Diesel C10-C24	ND	50	21
Motor Oil C24-C36	ND	300	42

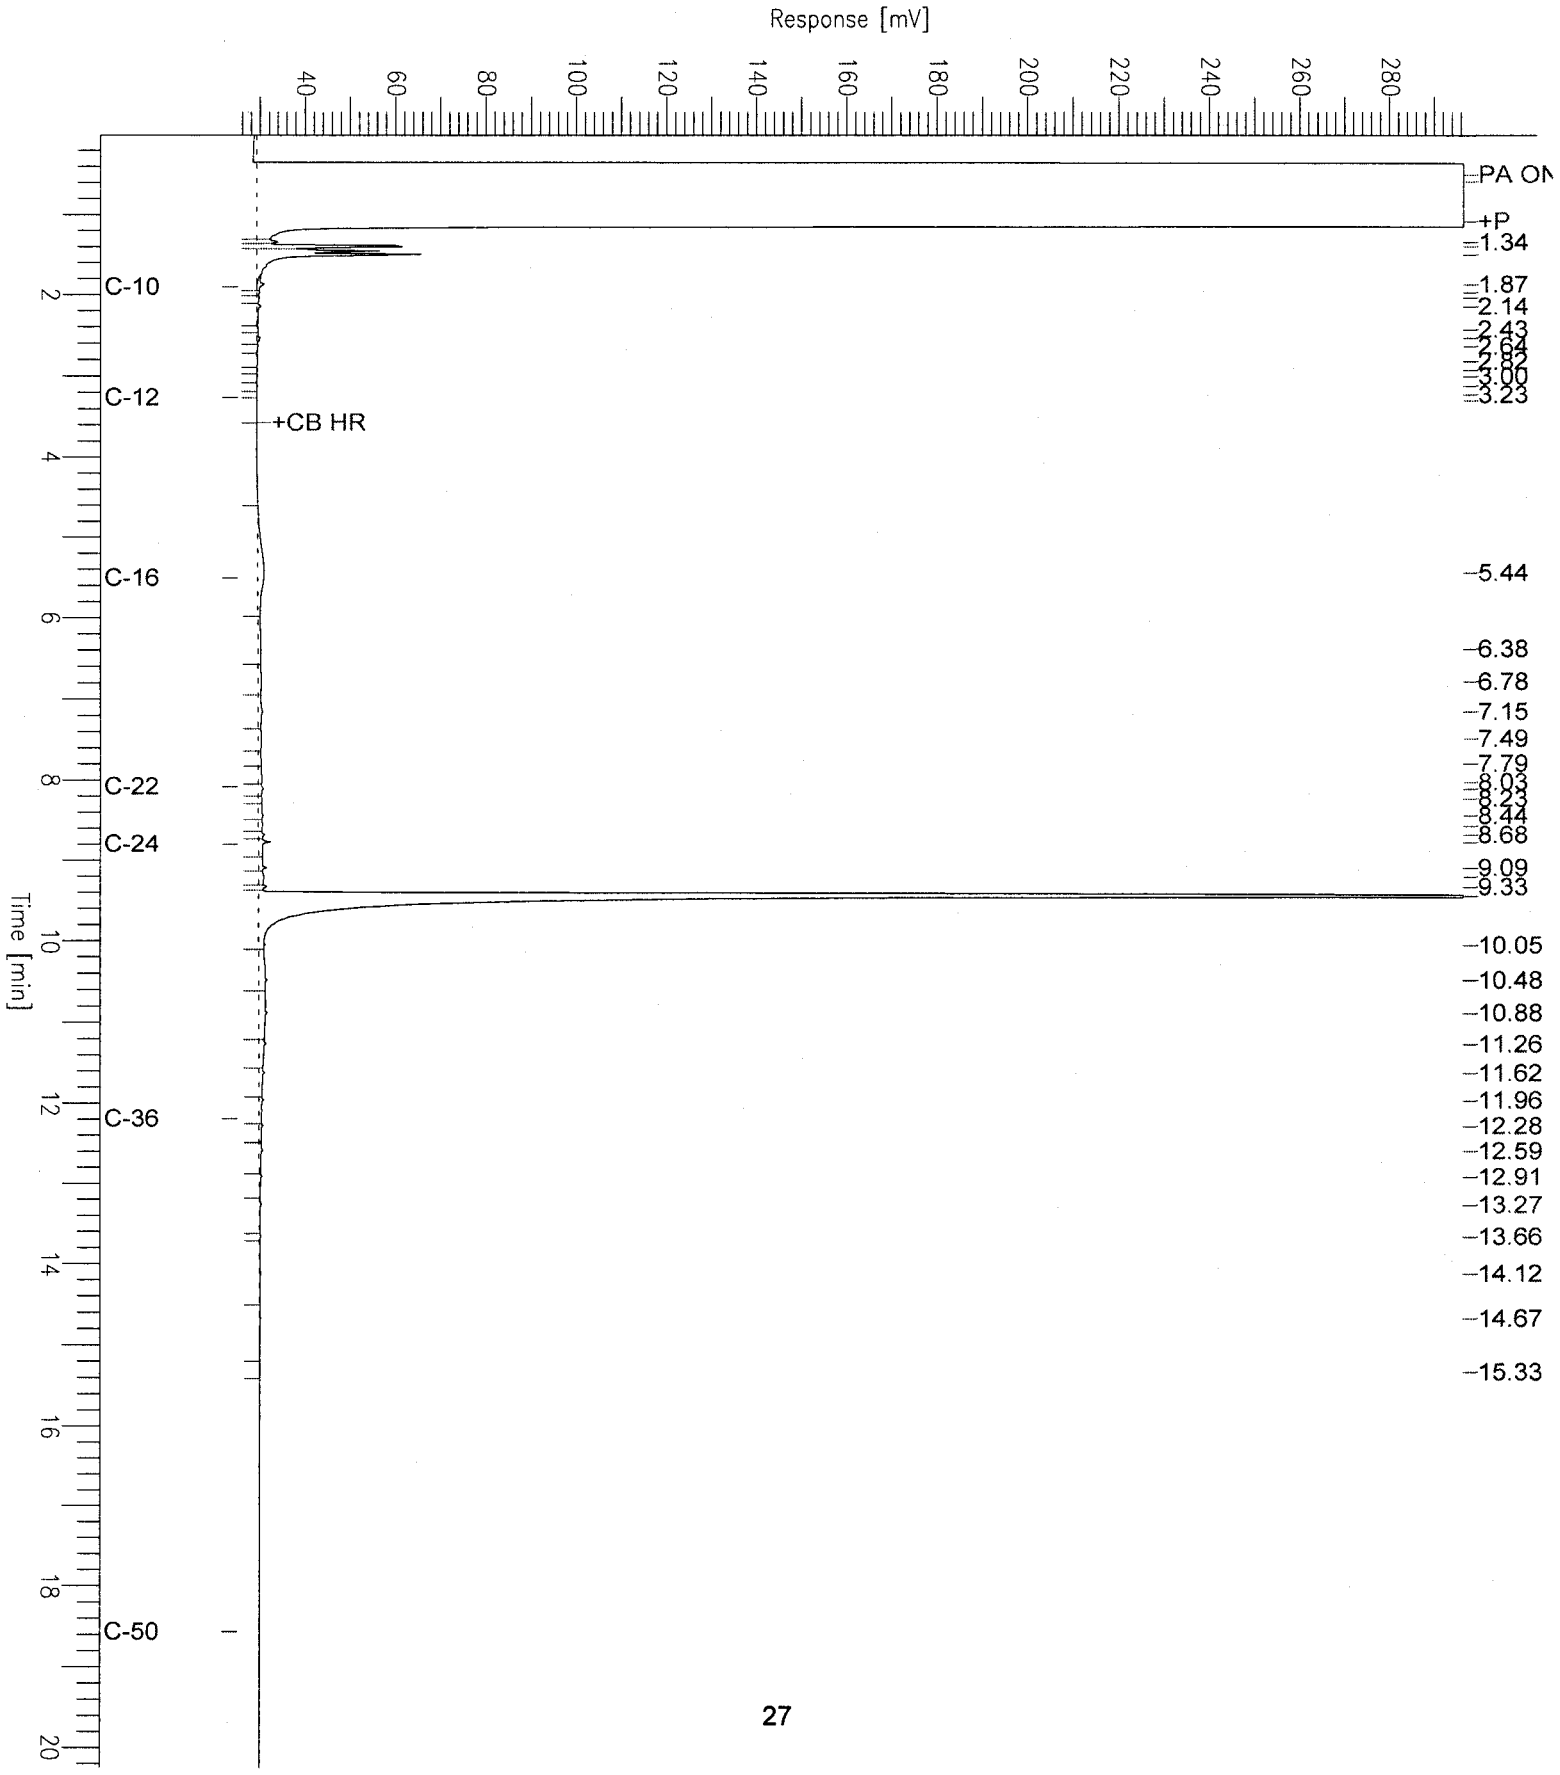
Surrogate	%REC	Limits
Hexacosane	108	55-143

J= Estimated value
Y= Sample exhibits chromatographic pattern which does not resemble standard
ND= Not Detected
RL= Reporting Limit
MDL= Method Detection Limit

Chromatogram

Sample Name : 179714-001sg,102734
FileName : G:\GC11\CHA\158A049.RAW
Method : ATEH156S.MTH
Start Time : 0.01 min End Time : 20.25 min
Scale Factor: 0.0 Plot Offset: 25 mV

Sample #: 102734 Page 1 of 1
Date : 6/8/05 07:48 PM
Time of Injection: 6/8/05 06:55 PM
Low Point : 24.97 mV High Point : 296.48 mV
Plot Scale: 271.5 mV



Chromatogram

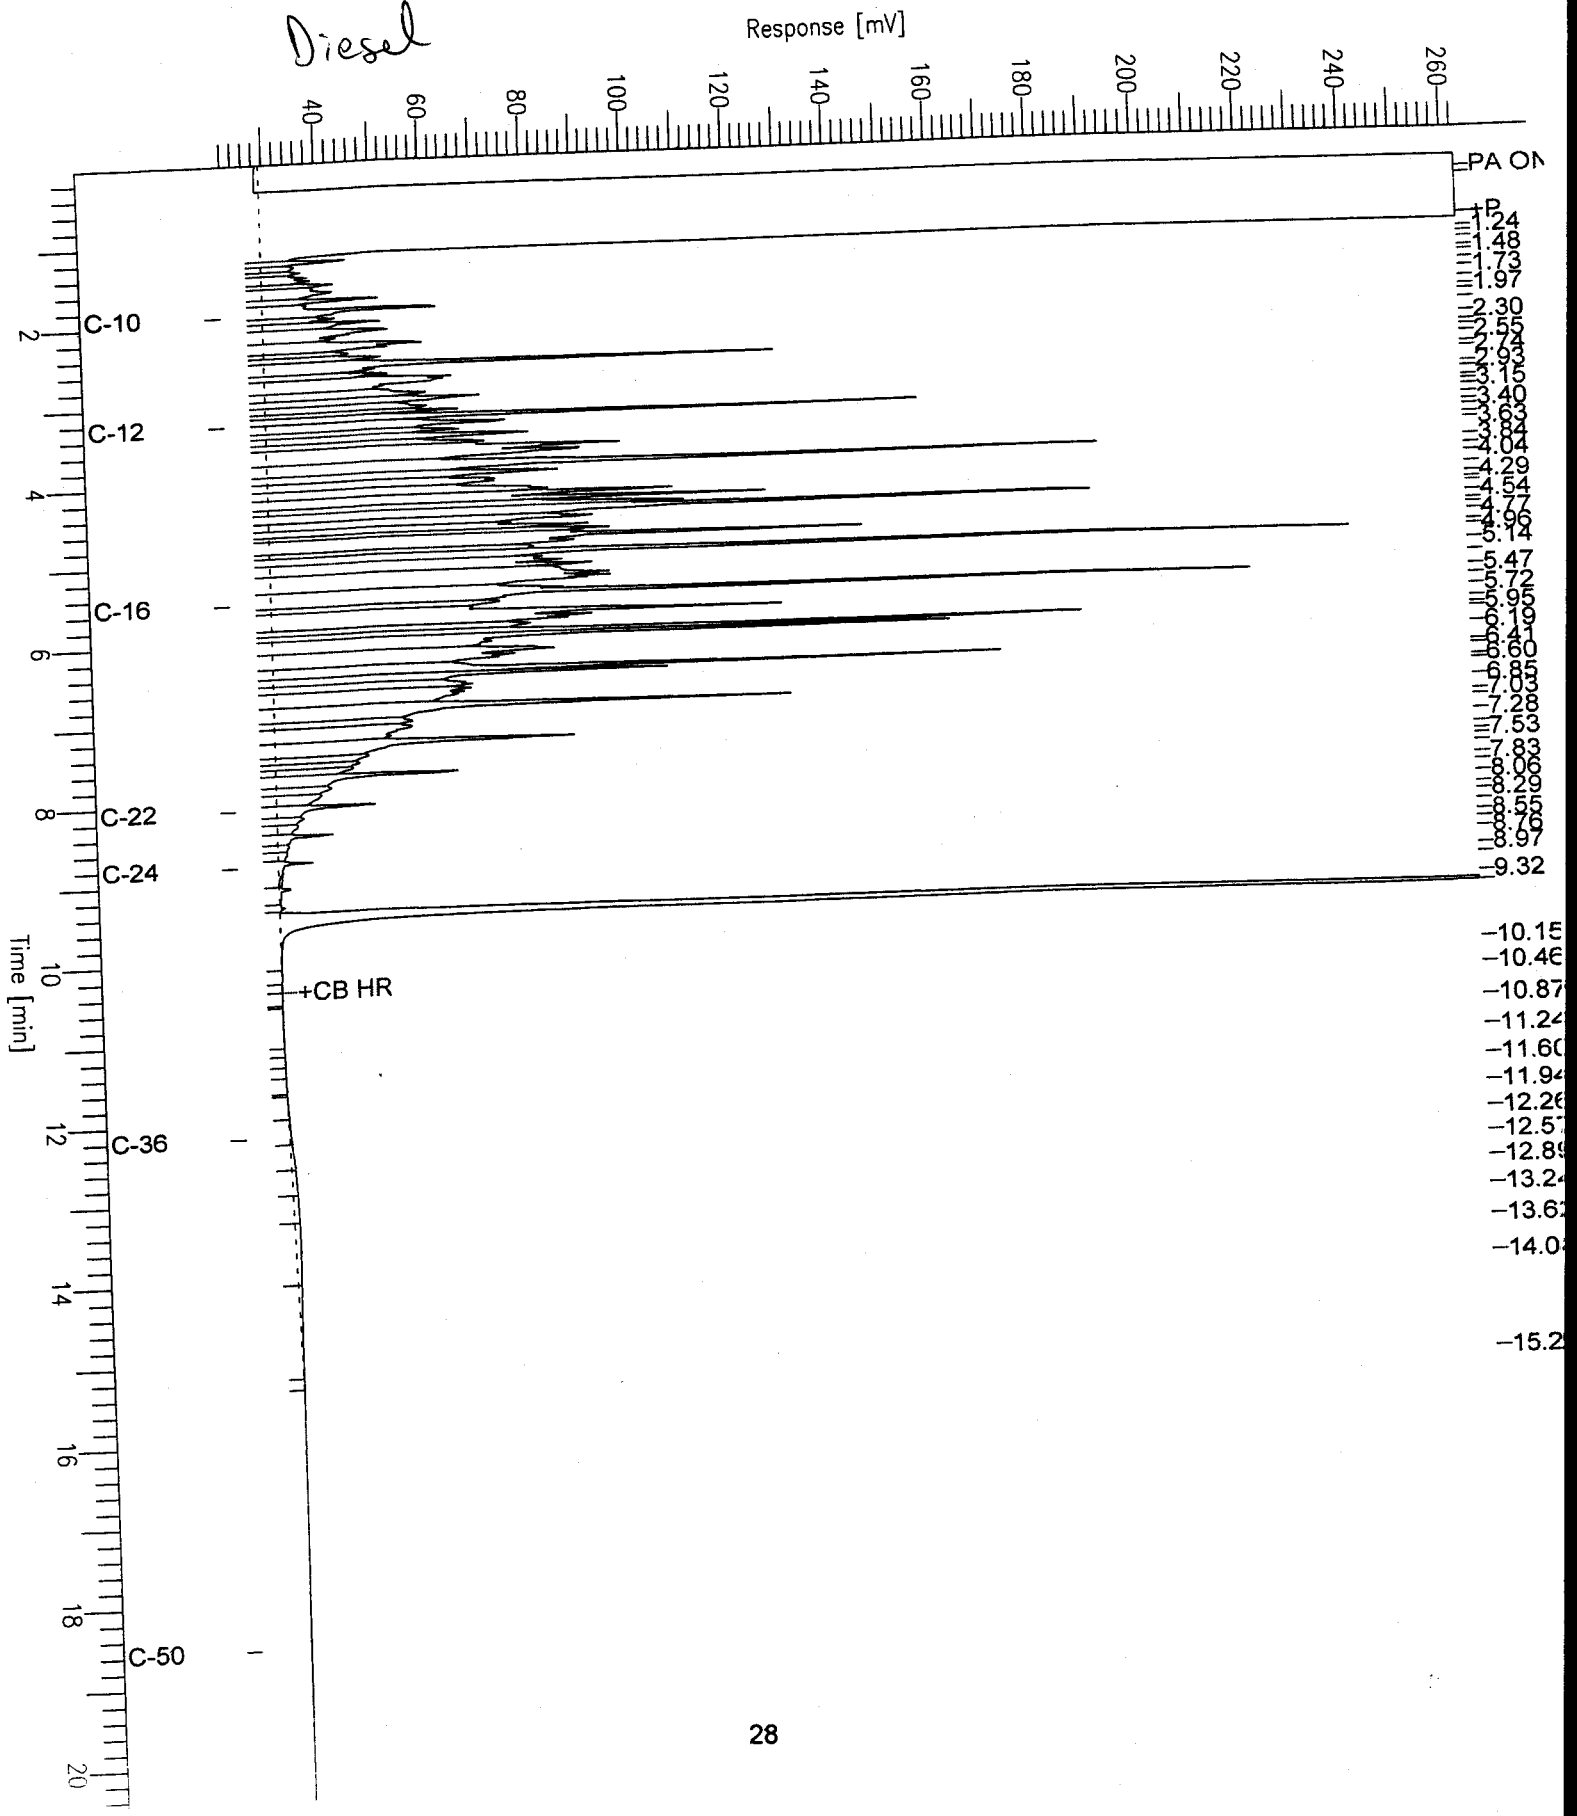
Sample Name : ccv,S778,dsl
FileName : G:\GC11\CHA\158A003.RAW
Method : ATEH156S.MTH
Start Time : 0.01 min
Scale Factor: 0.0

End Time : 20.45 min
Plot Offset: 21 mV

Sample #: 500mg/L
Date : 6/7/05 10:48 AM
Time of Injection: 6/7/05 10:06 AM
Low Point : 21.30 mV
Plot Scale: 241.3 mV

High Point : 262.59 mV

Diesel



Chromatogram

Sample Name : ccv,S653,mo
FileName : G:\GC11\CHA\158A004.RAW
Method : ATEH156S.MTH
Start Time : 0.09 min
Scale Factor: 0.0

End Time : 20.45 min
Plot Offset: 14 mV

Sample #: 500mg/L
Date : 6/7/05 11:21 AM
Time of Injection: 6/7/05 10:36 AM
Low Point : 13.70 mV
High Point : 149.35 mV
Plot Scale: 135.7 mV

CASE NARRATIVE

Analysis of Samples for the Presence of

Polychlorinated Dibenzo-p-dioxins and Dibenzofurans by

High-Resolution Chromatography / High-Resolution Mass Spectrometry

Method 8290 Rev. 0 (9/94)

Date:	June 22, 2005
Client ID:	Curtis & Tompkins
P.O. Number:	179714
Project Number:	65208

Eno River Labs, LLC has acquired the assets of Triangle Laboratories, Inc. and will continue its operations.

This report should only be reproduced in full. Any partial reproduction of this report requires written permission from Eno River Labs, LLC

Overview

The sample and associated QC samples were extracted and analyzed according to procedures described in EPA Method 8290 Rev. 0 (9/94). Any particular difficulties encountered during sample handling will be discussed in the QC Remarks section below. This report contains results from only the 8290 dioxin/furan analysis of one water sample.

Quality Control Samples

A laboratory method blank was prepared along with each batch of samples.

Laboratory control spike (LCS) and laboratory control spike duplicate (LCSD) samples were extracted and analyzed along with the samples. A report summarizing the analyte recoveries and relative percent differences for these samples is included in the data package.

Quality Control Remarks

This release of this particular set of Curtis & Tompkins analytical data by Eno River Labs, LLC was authorized by the Quality Control Chemist who has reviewed each sample data package following a series of inspections/reviews. When applicable, general deviations from acceptable QC requirements are identified below and comments are made on the effect of these deviations upon the validity and reliability of the results. Specific QC issues associated with this particular project are:

Sample receipt: One water sample was received from Curtis & Tompkins at 6°C in good condition on June 1, 2005 and stored in a refrigerator at 4°C. The client's chain-of-custody did not indicate whether chemical preservatives were utilized prior to shipment.

Sample Preparation Laboratory: None

Mass Spectrometry: None

Data Review: The percent recovery for 2,3,4,6,7,8-HxCDF in the LCS is below the QC limits (70 to 130 %). Also, the relative percent differences between the LCS and LCSD for 2,3,4,7,8-PeCDF, 2,3,4,6,7,8-HxCDF, 1,2,3,7,8-HxCDF, and 1,2,3,4,7,8,9-HpCDF are above the QC criteria (<20 %). Since the affected analytes are not detected in the associated field samples, with all detection limits reported less than the target detection limits, these findings have no significant impact on the results. The client was contacted and authorized release of the results without further action.

Other Comments: No 2,3,7,8-substituted target analytes were detected in the laboratory blank above the target detection limit (TDL).

Data Flags

In order to assist with data interpretation, data qualifier flags are used on the final reports. Please note that all data qualifier flags are subjective and are applied as consistently as possible. Each flag has been reviewed by two independent Chemists and the impact of the data qualifier flag on the quality of the data discussed above. The most commonly used flags are:

A **'B'** flag is used to indicate that an analyte has been detected in the laboratory method blank as well as in an associated field sample. The 'B' flag is used only when the amount of analyte found in the sample is less than 20 times that found in the associated blank. This flag denotes possible contribution of background laboratory contamination to the concentration or amount of that analyte detected in the field sample.

An **'E'** flag is used to indicate a concentration based on an analyte to internal standard ratio which exceeds the range of the calibration curve. Values which are outside the calibration curve are estimates only.

An **'I'** flag is used to indicate labeled standards have been interfered with on the GC column by coeluting, interferent peaks. The interference may have caused the standard's area to be overestimated. All quantitations relative to this standard, therefore, may be underestimated.

A **'J'** flag is used to indicate a concentration based on an analyte to internal standard ratio which is below the calibration curve. Values which are outside the calibration curve are estimates only.

A **'PR'** flag is used to indicate that a GC peak is poorly resolved. This resolution problem may be seen as two closely eluting peaks without a reasonable valley between the peak tops, overly broad peaks, or peaks whose shapes vary greatly from a normal distribution. The concentrations or amounts reported for such peaks are most likely overestimated.

A **'Q'** flag is used to indicate the presence of QC ion instabilities caused by quantitative interferences.

An **'RO'** flag is used to indicate that a labeled standard has an ion abundance ratio that is outside of the acceptable QC limits, most likely due to a coeluting interference. This may have caused the percent recovery of the standard to be overestimated. All quantitations versus this standard, therefore, may be underestimated.

An **'S'** flag indicates that the response of a specific PCDD/PCDF isomer has exceeded the normal dynamic range of the mass spectrometer detection system. The corresponding signal is saturated and the reported analyte concentration is a 'minimum estimate'. When the 'S' qualifier is used in the reporting of 'totals', there is saturation of one (not

Method 8290 contains separate criteria for beginning and ending continuing calibrations. When the ending calibration meets criteria established for the beginning calibration, the average response factor from the initial calibration is used. When the ending calibration only meets the less stringent criteria specified for an ending calibration, the average of the response factor from the beginning and ending calibration is used for analyte and internal standard calculations. Affected samples are identified by the listing of both the beginning and ending calibration filename on the sample report.

EMPC stands for **E**stimated **M**aximum **P**ossible **C**oncentration. A dioxin or furan analyte is quantitated as an EMPC when the detected analyte meets the retention time criteria of a dioxin or furan, but not the isotopic ratio criteria. Interferences, such as PCBs, may co-elute or cause quantitative interference, causing a peak ratio to be outside criteria. Low level peaks that are close to the detection limits can be significantly affected by instrument and chemical noise, causing the ratio to be outside criteria. As a result, the reported value(s) should be considered estimated at the highest level possible.

The analytical results presented in this report are consistent with the guidelines of EPA Method 8290 Rev. 0 (9/94). Any exceptions have been discussed in the QC Remarks section of this case narrative with emphasis on their effect on the results. Should Curtis & Tompkins have any questions or comments regarding this data package, please feel free to contact our customer service at (919) 281-4013.

Kenneth Varley

Report Preparation Chemist
Eno River Labs, LLC

The total number of pages in the data package is : 108 .

Method 8290 Sample Calculations:

Analyte Concentration

The concentration or amount of any analyte is calculated using the following expression.

$$C_{(\sigma)} = \frac{A_\sigma * Q_\beta}{A_\beta * RRF_{(\sigma)} * W}$$

Where:

$C_{(\sigma)}$	=	concentration or amount of a given analyte
A_σ	=	integrated current for the characteristic ions of the analyte
A_β	=	integrated current of the characteristic ions of the corresponding internal standard
Q_β	=	amount of internal standard added to the sample before extraction
$RRF_{(\sigma)}$	=	mean analyte relative response factor from the initial calibration
W	=	sample weight or volume

Detection Limits

The detection limit reported for a target analyte that is not detected or presents an analyte response that is less than 2.5 times the background level is calculated by using the following expression. The area of the analyte is replaced by the noise level measured in a region of the chromatogram clear of genuine GC signals. The detection limits represent the maximum possible concentration of a target analyte that could be present without being detected.

$$DL_{(\sigma)} = \frac{2.5 * H * Q_\beta}{H_\beta * RRF_{(\sigma)} * W}$$

Where:

$DL_{(\sigma)}$	=	estimated detection limit for a target analyte
2.5	=	minimum response required for a GC signal
H	=	sum heights of the noise
H_β	=	sum of peak heights of the characteristic ions of the corresponding internal standard
Q_β	=	amount of internal standard added to the sample before extraction
$RRF_{(\sigma)}$	=	mean analyte relative response factor from the initial calibration
W	=	sample weight or volume

necessarily from a specific isomer) or more saturated signals for a given class of compounds. Results for saturated analytes are reported as greater than the upper calibration limit.

A **'U'** flag is used to indicate that a specific isomer cannot be resolved from a large, co-eluting interferent GC peak. The specific isomer is reported as not detected as a valid concentration cannot be determined. The calculated detection limit, therefore, should be considered an underestimated value.

A **'V'** flag is used to indicate that, although the percent recovery of a labeled standard may be below a specific QC limit, the signal-to-noise ratio of the peak is greater than ten-to-one. The standard is considered reliably quantifiable. All quantitations derived from the standard are considered valid as well.

An **'X'** flag is used to indicate that a polychlorodibenzofuran (PCDF) peak has eluted at the same time as the associated diphenyl ether (DPE) and that the DPE peak intensity is at least ten percent of the total PCDF peak intensity. Total PCDF values are flagged 'X' if the total DPE contribution to the total PCDF value is greater than ten percent. All PCDF peaks that are significantly influenced by the presence of DPE peaks are either reported as "estimated maximum possible concentration (EMPC) values without regard to the isotopic abundance ratio, or are included in the detection limit value depending on the analytical method.

Data Review By: PAB 6/16/05

Channel specific noise levels computed from 'NL' heights.

The Total Area for each peak with an ion abundance ratio outside ratio limits has been recalculated according to method requirements.

Initial ....Date...

Data Review By: PaB 6/16/05

Channel specific noise levels computed from 'NL' heights.

The Total Area for each peak with an ion abundance ratio outside
ratio limits has been recalculated according to method requirements.

CASE NARRATIVE

Laboratory number:	**180973**
Client:	**Mactec, Inc.**
Project:	**57255 001 22**
Location:	**Presidio / Baker Beach**
Request Date:	**08/02/05**
Samples Received:	**08/02/05**

This hardcopy data package contains sample and QC results for one water sample, requested for the above referenced project on 08/02/05. The sample was received cold and intact.

Metals (EPA 6020 and EPA 7470A) Water:

High % difference was observed for zinc in the serial dilution of BB1PZ101 (lab # 180973-001). No other analytical problems were encountered.

Metals (EPA 6020 and EPA 7470A) Filtrate:

High % difference was observed for zinc in the serial dilution of BB1PZ101 (lab # 180973-001). No other analytical problems were encountered.

COOLER RECEIPT CHECKLIST

Login#: 180973 Date Received: 8-2-05 Number of Coolers: 1
Client: Mactec Project: Presidio SF - BBDA

A. Preliminary Examination Phase
Date Opened: 8-2-05 By (print): Tray Windsor (sign) Tray E Windsor

1. Did cooler come with a shipping slip (airbill, etc.)? ..... YES (NO)
   If YES, enter carrier name and airbill number: _____
2. Were custody seals on outside of cooler? ..... YES (NO)
   How many and where? _____ Seal date: _____ Seal name: _____
3. Were custody seals unbroken and intact at the date and time of arrival? ..... YES NO N/A
4. Were custody papers dry and intact when received? ..... (YES) NO
5. Were custody papers filled out properly (ink, signed, etc.)? ..... (YES) NO
6. Did you sign the custody papers in the appropriate place? ..... (YES) NO
7. Was project identifiable from custody papers? ..... (YES) NO
   If YES, enter project name at the top of this form.
8. If required, was sufficient ice used? Samples should be 2-6 degrees C. ..... YES NO
   Type of ice: Wet Temperature: Cold - no temp blank

B. Login Phase
Date Logged In: 8-2-05 By (print): Tray Windsor (sign) Tray E Windsor

1. Describe type of packing in cooler: Bottles between bagged ice
2. Did all bottles arrive unbroken? ..... (YES) NO
3. Were labels in good condition and complete (ID, date, time, signature, etc.)? .. (YES) NO
4. Did bottle labels agree with custody papers? ..... (YES) NO
5. Were appropriate containers used for the tests indicated? ..... (YES) NO
6. Were correct preservatives added to samples? ..... (YES) NO
7. Was sufficient amount of sample sent for tests indicated? ..... (YES) NO
8. Were bubbles absent in VOA samples? If NO, list sample Ids below ..... YES NO N/A
9. Was the client contacted concerning this sample delivery? ..... YES NO
   If YES, give details below.
   Who was called? _____ By whom? _____ Date: _____

CASE NARRATIVE

Laboratory number:	**182254**
Client:	**Mactec, Inc.**
Project:	**57255 001 22**
Location:	**Presidio / Baker Beach**
Request Date:	**10/04/05**
Samples Received:	**10/04/05**

This hardcopy data package contains sample and QC results for eight soil samples, requested for the above referenced project on 10/04/05. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
Encore samples not analyzed within 48 hours were frozen. Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 106339; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
Encore samples not analyzed within 48 hours were frozen. High responses were observed for a number of analytes in the ICV analyzed 09/30/05 11:46; these analytes were not detected at or above the RL in the associated samples. Low response was observed for Freon 12 in the ICV analyzed 09/29/05 17:58; this analyte was not detected at or above the RL in the associated samples. Low response was observed for carbon disulfide in the CCV analyzed 10/06/05 09:26; this analyte met minimum response criteria. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
High response was observed for naphthalene in the CCV analyzed 10/19/05 08:44; this analyte was not detected at or above the RL in the associated samples, and affected data was qualified with "b". Low internal standard responses were observed for chrysene-d12 and perylene-d12 in BBITP113(3.0) (lab # 182254-003). Many analytes were detected between the MDL and the RL in the method blank for batch 106817. No other analytical problems were encountered.

Pesticides (EPA 8081A):
High ICAL percent RSD (relative standard deviation) was observed for delta-BHC in the calibration analyzed 09/27/05 22:26; average ICAL %RSD met method requirements, and this analyte was not detected at or above the RL in the associated samples. High response was observed for methoxychlor in the ICV analyzed 09/22/05 04:25; average ICV drift met method requirements, and this analyte was not detected at or above the RL in the associated samples. High response was observed for methoxychlor in the ICV analyzed 09/28/05 02:12; average ICV drift met method requirements, and this analyte was not

CASE NARRATIVE

Laboratory number:	**182254**
Client:	**Mactec, Inc.**
Project:	**57255 001 22**
Location:	**Presidio / Baker Beach**
Request Date:	**10/04/05**
Samples Received:	**10/04/05**

Pesticides (EPA 8081A):
detected at or above the RL in the associated samples. High response was observed for heptachlor in the CCV analyzed 10/18/05 00:53; average CCV drift met method requirements, and this analyte was not detected at or above the RL in the associated samples. No other analytical problems were encountered.

Polychlorinated Biphenyls (PCBs) (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Chromium, copper, and molybdenum were detected between the MDL and the RL in the method blank for batch 106787; these analytes were either not detected in samples at or above the RL, or detected at a level at least ten times that of the blank. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):
No analytical problems were encountered.

Pat attached is chain of custody (# 2004) for samples collected from Baker Beach on October 3. By virtue of this message please change the sample #s as indicated.

All BB1TP107 samples to BB1TP110
All BB1TP109 samples to BB1TP113
All BB1TP108 samples to BB1TP111

I can not find the sample delivery # in my data, so I don't think we have been given results yet. I apologize for any confusion. Please call me if you have any questions. Thanks

Gary

Granular Na_2SO_4 (powder)

Sand weighed out for QC samples
Samples were dried with CH_2Cl_2-rinsed granular Na_2SO_4
1.0 mL of TEH_SURR surrogate solution was added to all samples
1.0 mL of TEH_SP matrix spiking solution was added to all spikes
≥ 75 mL of 1+1 (CH_2Cl_2+Acetone) was added to all
Samples were: ☐ sonicated 3 times ☒ placed on shaker table at:
taken off shaker table at:
Extracts filtered through baked, rinsed powdered Na_2SO_4
Concentrated to volumes as noted above

PCBs Results & QC Summary

Curtis & Tompkins, Ltd.

Polychlorinated Biphenyls (PCBs)

Lab #:	182254	Location:	Presidio / Baker Beach
Client:	Mactec, Inc.	Prep:	EPA 3550B
Project#:	57255 001 22	Analysis:	EPA 8082
Matrix:	Soil	Diln Fac:	1.000
Units:	ug/Kg	Received:	10/04/05

Field ID:	BBITP110(8.0)	Batch#:	106600
Type:	SAMPLE	Sampled:	10/03/05
Lab ID:	182254-001	Prepared:	10/11/05
Basis:	dry	Analyzed:	10/14/05
Moisture:	15%	Cleanup Method:	EPA 3620B

Analyte	Result	RL	MDL
Aroclor-1016	ND	11	1.8
Aroclor-1221	ND	23	7.5
Aroclor-1232	ND	11	1.9
Aroclor-1242	ND	11	1.7
Aroclor-1248	ND	11	2.4
Aroclor-1254	ND	11	3.9
Aroclor-1260	ND	11	1.8

Surrogate	%REC	Limits
TCMX	88	62-142
Decachlorobiphenyl	98	53-153

Field ID:	BBITP110(12.0)	Batch#:	106600
Type:	SAMPLE	Sampled:	10/03/05
Lab ID:	182254-002	Prepared:	10/11/05
Basis:	dry	Analyzed:	10/14/05
Moisture:	16%	Cleanup Method:	EPA 3620B

Analyte	Result	RL	MDL
Aroclor-1016	ND	12	1.9

granular Na_2SO_4 Sand weighed out for QC samples

dried with CH_2Cl_2-rinsed ☑ ~~granular~~ Na_2SO_4 ☐ diatomaceous earth

6.05 mL of surrogate solution was added to all samples

0.05 mL of spike solution AC1248 was added to all spikes

1:1 CH_2Cl_2 (lot# EA45788):Acetone(lot# EA45125) was added to all

☑ sonicated 3 times w/ ≥100mL ☐ PFE extracted ☐ soxhlet extracted

ASE Cellulose Filters used:

PFE (ASE) / soxhlets on at:

PFE (ASE) / soxhlets off at:

Extracts filtered through baked, CH_2Cl_2-rinsed ~~granular~~ Na_2SO_4

Concentrated to volumes noted above after exchange to Hexane Lot#

EPA 3665A Clean-up: vortexed w/ 10mL H_2SO_4 Lot#

Centrifuged for 1 min; 10mL transferred to labelled vial

Na_2SO_4
~~Sand~~ weighed out for QC samples

Samples were dried with baked, CH_2Cl_2-rinsed granular Na_2SO_4

1.0 mL of surrogate solution was added to all samples

1.0 mL of matrix spiking solution was added to all spikes

≥100mL 1:1 CH_2Cl_2:Acetone was added to all:

Samples were: ☑ sonicated 3 times ☐ soxhlet extractors on at:

soxhlets off at:

Extracts filtered through baked, CH_2Cl_2-rinsed powdered Na_2SO_4

Concentrated: ☑ to volumes as noted above ☐ to clean-up volume

Clean-up (if necessary): ☐ GPC (see GPC run log) ☐ Silica Gel

Concentrated to final volumes as noted above

CASE NARRATIVE

Laboratory number:	**182357**
Client:	**Mactec, Inc.**
Project:	**57255 001 22**
Location:	**Presidio / Baker Beach**
Request Date:	**10/10/05**
Samples Received:	**10/10/05**

This hardcopy data package contains sample and QC results for two soil samples, requested for the above referenced project on 10/10/05. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 106592; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
High recovery was observed for 1,1-dichloroethene in the MSD for batch 106606; the parent sample was not a project sample, the LCS was within limits, the associated RPD was within limits, and this analyte was not detected at or above the RL in the associated samples. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
High response was observed for benzo(k)fluoranthene in the ICV analyzed 10/25/05 17:33; this analyte was not detected at or above the RL in the associated samples. High responses were observed for benzo(g,h,i)perylene, dibenz(a,h)anthracene, and indeno(1,2,3-cd)pyrene in the CCV analyzed 10/26/05 16:17 and the CCV analyzed 10/27/05 10:19; these analytes were not detected at or above the RL in the associated sample and method blank, and affected data was qualified with "b". No other analytical problems were encountered.

Pesticides (EPA 8081A):
High ICAL percent RSDs (relative standard deviations) were observed for beta-BHC and delta-BHC in the calibration analyzed 09/27/05 22:26; average ICAL %RSD met method requirements, and these analytes were not detected at or above the RL in the associated samples. High responses were observed for heptachlor and methoxychlor in the ICV analyzed 09/28/05 02:12; average ICV drift met method requirements, and these analytes were not detected at or above the RL in the associated samples. Low responses were observed for beta-BHC and delta-BHC in the CCV analyzed 10/20/05 16:44; average CCV drift met method requirements. Low response was observed for delta-BHC in the CCV analyzed 10/20/05 10:18; average CCV drift met method requirements. High response was observed for heptachlor; average CCV drift met method

CASE NARRATIVE

Laboratory number:	**182357**
Client:	**Mactec, Inc.**
Project:	**57255 001 22**
Location:	**Presidio / Baker Beach**
Request Date:	**10/10/05**
Samples Received:	**10/10/05**

Pesticides (EPA 8081A):
requirements, and this analyte was not detected at or above the RL in the associated samples. High recovery was observed for 4,4'-DDT in the MS for batch 106900; the parent sample was not a project sample, the LCS was within limits, the associated RPD was within limits, and this analyte was not detected at or above the RL in the associated samples. Endrin aldehyde was detected between the MDL and the RL in the method blank for batch 106900; this analyte was not detected in samples at or above the RL. BBSB119(2.5) (lab # 182357-001) was diluted due to the dark, viscous nature of the sample extract. No other analytical problems were encountered.

Polychlorinated Biphenyls (PCBs) (EPA 8082):
High surrogate recovery was observed for decachlorobiphenyl in the MSD for batch 107008; the corresponding TCMX surrogate recovery was within limits, and the parent sample was not a project sample. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
A number of analytes were detected between the MDL and the RL in the method blank for batch 106917; these analytes were either not detected in samples at or above the RL, or detected at a level at least ten times that of the blank. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):
No analytical problems were encountered.

COOLER RECEIPT CHECKLIST

Login#: 182357 Date Received: 10/10/05 Number of Coolers: 1
Client: MACTEC Project: Presidio - SF

A. Preliminary Examination Phase
Date Opened: 10/10/05 By (print): John P. (sign) [signature]

1. Did cooler come with a shipping slip (airbill, etc.)? ..... YES (NO)
   If YES, enter carrier name and airbill number: _____
2. Were custody seals on outside of cooler? ..... YES (NO)
   How many and where? _____ Seal date: _____ Seal name: _____
3. Were custody seals unbroken and intact at the date and time of arrival? ..... YES NO N/A
4. Were custody papers dry and intact when received? ..... (YES) NO
5. Were custody papers filled out properly (ink, signed, etc.)? ..... (YES) NO
6. Did you sign the custody papers in the appropriate place? ..... (YES) NO
7. Was project identifiable from custody papers? ..... (YES) NO
   If YES, enter project name at the top of this form.
8. If required, was sufficient ice used? Samples should be 2-6 degrees C. ..... YES NO
   Type of ice: wet Temperature: on ice NO temp Ø

B. Login Phase
Date Logged In: 10/10/05 By (print): John P. (sign) [signature]

1. Describe type of packing in cooler: 2Q loc bags
2. Did all bottles arrive unbroken? ..... (YES) NO
3. Were labels in good condition and complete (ID, date, time, signature, etc.)? ..... (YES) NO
4. Did bottle labels agree with custody papers? ..... (YES) NO
5. Were appropriate containers used for the tests indicated? ..... (YES) NO
6. Were correct preservatives added to samples? ..... YES NO N/A
7. Was sufficient amount of sample sent for tests indicated? ..... (YES) NO
8. Were bubbles absent in VOA samples? If NO, list sample Ids below ..... YES NO N/A
9. Was the client contacted concerning this sample delivery? ..... YES NO
   If YES, give details below.
   Who was called? _____ By whom? _____ Date: _____

~~Sand~~ Na_2SO_4 weighed out for QC samples	EM 44135439	SHD 10/21/05
Samples were dried with CH_2Cl_2-rinsed ~~granular~~ powder Na_2SO_4	STB 25151	
1.0 mL of TEH_SURR surrogate solution was added to all samples	S1772D	
1.0 mL of TEH_SP matrix spiking solution was added to all spikes	S1709B	
≥ 75 mL of 1+1 (CH_2Cl_2+Acetone) was added to all CH_2Cl_2	EM 45188	
Acetone	EM 45125	
Samples were: ☐ sonicated 3 times ☑ placed on shaker table at:	1220	
taken off shaker table at:	1455	SHD 10/21/05
Extracts filtered through baked, rinsed powdered Na_2SO_4	STB 25151	SEE for MJM 10/22/05
Concentrated to volumes as noted above	✓	↓

Granular Na_2SO_4

~~Sand~~ weighed out for QC samples

dried with CH_2Cl_2-rinsed ☐ granular Na_2SO_4 ☐ diatomaceous earth

0.05 mL of surrogate solution was added to all samples

0.05 mL of spike solution AR1248 was added to all spikes

1:1 CH_2Cl_2 (lot# EM45188):Acetone(lot# EM45126) was added to all

☐ sonicated 3 times w/ ≥100mL ☐ PFE extracted ☐ soxhlet extracted

ASE Cellulose Filters used:

PFE (ASE) / soxhlets on at:

PFE (ASE) / soxhlets off at:

Extracts filtered through baked, CH_2Cl_2-rinsed granular Na_2SO_4

Concentrated to volumes noted above after exchange to Hexane Lot#

EPA 3665A Clean-up: vortexed w/ 10mL H_2SO_4 Lot#

Centrifuged for 1 min; 10mL transferred to labelled vial

Curtis & Tompkins, Ltd. **8270 SOIL PREP LOG**

LIMS Batch No: 107020
LIMS Analysis 8270 - SIM
Extracted by: BRG
Date Extracted: 10/23/05

Extraction Method:
- ☑ EPA 3550b Sonication
- ☐ EPA 3540c Soxhlet
- ☐ Other _____

Cleanup Method (if necessary):
- ☐ EPA 3640a GPC
- ☐ EPA 3630c Silica Gel
- ☐ Other _____

Gran Na_2SO_4
~~Sand~~ weighed out for QC samples

Samples were dried with baked, CH_2Cl_2-rinsed granular Na_2SO_4

1.0 mL of surrogate solution was added to all samples

1.0 mL of matrix spiking solution was added to all spikes

≥100mL 1:1 CH_2Cl_2:Acetone was added to all:

Samples were: ☑ sonicated 3 times ☐ soxhlet extractors on at:

Extracts filtered through baked, CH_2Cl_2-rinsed powdered Na_2SO_4

Concentrated: ☑ to volumes as noted above ☐ to clean-up volume

Clean-up (if necessary): ☐ GPC (see GPC run log) ☐ Silica Gel

Concentrated to final volumes as noted above

CASE NARRATIVE

Laboratory number:	**184678**
Client:	**Mactec, Inc.**
Project:	**57255.005122**
Location:	**PT Baker Beach BBDA2**
Request Date:	**02/01/06**
Samples Received:	**02/01/06**

This hardcopy data package contains sample and QC results for two soil samples, requested for the above referenced project on 02/01/06. The samples were received cold and intact.

Metals (EPA 6010B and EPA 7471A):
Low recoveries were observed for silver and antimony in the MS/MSD of BB2SB110(0.5) (lab # 184678-001); the BS/BSD were within limits, and the associated RPDs were within limits. Response exceeding the instrument's linear range was observed for nickel in the MS of BB2SB110(0.5) (lab # 184678-001). Chromium, nickel, and thallium were detected between the MDL and the RL in the method blank for batch 110124; these analytes were either not detected in samples at or above the RL, or detected at a level at least ten times that of the blank. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):
No analytical problems were encountered.

COOLER RECEIPT CHECKLIST

Login#: 124678 Date Received: 2/1/00 Number of Coolers: 1
Client: Mactec Project: Baker Beach

A. Preliminary Examination Phase
Date Opened: 2/1/00 By (print): Peter P. (sign)

1. Did cooler come with a shipping slip (airbill, etc.)? ... YES (NO)
   If YES, enter carrier name and airbill number:
2. Were custody seals on outside of cooler? ... YES (NO)
   How many and where? Seal date: Seal name:
3. Were custody seals unbroken and intact at the date and time of arrival? ... YES NO N/A
4. Were custody papers dry and intact when received? ... (YES) NO
5. Were custody papers filled out properly (ink, signed, etc.)? ... (YES) NO
6. Did you sign the custody papers in the appropriate place? ... (YES) NO
7. Was project identifiable from custody papers? ... (YES) NO
   If YES, enter project name at the top of this form.
8. If required, was sufficient ice used? Samples should be 2-6 degrees C. ... YES NO
   Type of ice: Wet Ice Temperature: no Temperature Blank Pac

B. Login Phase
Date Logged In: 2/1/00 By (print): John P. (sign)

1. Describe type of packing in cooler: Bubble Wrap
2. Did all bottles arrive unbroken? ... (YES) NO
3. Were labels in good condition and complete (ID, date, time, signature, etc.)? ... (YES) NO
4. Did bottle labels agree with custody papers? ... (YES) NO
5. Were appropriate containers used for the tests indicated? ... (YES) NO
6. Were correct preservatives added to samples? ... YES NO N/A
7. Was sufficient amount of sample sent for tests indicated? ... (YES) NO
8. Were bubbles absent in VOA samples? If NO, list sample Ids below ... YES NO N/A
9. Was the client contacted concerning this sample delivery? ... YES NO
   If YES, give details below.
   Who was called? By whom? Date:

CASE NARRATIVE

Laboratory number:	**185149**
Client:	**Mactec, Inc.**
Project:	**57255.005102**
Location:	**PT Baker Beach BBDA1**
Request Date:	**02/24/06**
Samples Received:	**02/01/06**

This hardcopy data package contains sample and QC results for one soil sample, requested for the above referenced project on 02/24/06. The sample was received cold and intact.

Metals (EPA 6010B and EPA 7471A):
Low recoveries were observed for silver and antimony in the MS/MSD for batch 110908; the parent sample was not a project sample, the BS/BSD were within limits, and the associated RPDs were within limits. High recovery was observed for copper in the MSD for batch 110908; the BS/BSD were within limits, and the associated RPD was within limits. High % differences were observed for cobalt, copper, and nickel in the serial dilution for batch 110908. Chromium, copper, and nickel were detected between the MDL and the RL in the method blank for batch 110908; these analytes were detected in the sample at a level at least ten times that of the blank. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):
No analytical problems were encountered.

2. Were custody seals on outside of cooler? ... YES (NO)
   How many and where? _____ Seal date: _____ Seal name: _____ N/A
3. Were custody seals unbroken and intact at the date and time of arrival? ... YES NO
4. Were custody papers dry and intact when received? ... (YES) NO
5. Were custody papers filled out properly (ink, signed, etc.)? ... (YES) NO
6. Did you sign the custody papers in the appropriate place? ... (YES) NO
7. Was project identifiable from custody papers? ... (YES) NO
   If YES, enter project name at the top of this form.
8. If required, was sufficient ice used? Samples should be 2-6 degrees C. ... YES NO
   Type of ice: Wet Ice Temperature: no Temperature Blank Per

B. Login Phase
Date Logged In: 2/1/00 By (print): Peter P. (sign) [signature]

1. Describe type of packing in cooler: Bubble Wrap
2. Did all bottles arrive unbroken? ... (YES) NO
3. Were labels in good condition and complete (ID, date, time, signature, etc.)? ... (YES) NO
4. Did bottle labels agree with custody papers? ... (YES) NO
5. Were appropriate containers used for the tests indicated? ... (YES) NO
6. Were correct preservatives added to samples? ... YES NO N/A
7. Was sufficient amount of sample sent for tests indicated? ... (YES) NO
8. Were bubbles absent in VOA samples? If NO, list sample Ids below. ... YES NO N/A
9. Was the client contacted concerning this sample delivery? ... YES NO
   If YES, give details below.
   Who was called? _____ By whom? _____ Date: _____

CASE NARRATIVE

Laboratory number:	**185213**
Client:	**Mactec, Inc.**
Project:	**57255.005122**
Location:	**PT Baker Beach BBDA2**
Request Date:	**02/28/06**
Samples Received:	**02/01/06**

This hardcopy data package contains sample and QC results for one soil sample, requested for the above referenced project on 02/28/06. The sample was received cold and intact.

Metals (EPA 6010B and EPA 7471A):
Low recoveries were observed for silver, cobalt, and antimony in the MS/MSD of BB2SB110(1.0) (lab # 185213-001); the BS/BSD were within limits, and the associated RPDs were within limits. High recovery was observed for chromium in the MS of BB2SB110(1.0) (lab # 185213-001); the BS/BSD were within limits. High RPD was also observed for chromium in the MS/MSD of BB2SB110(1.0) (lab # 185213-001); the RPD was acceptable in the BS/BSD. Response exceeding the instrument's linear range was observed for nickel in the MS of BB2SB110(1.0) (lab # 185213-001). A number of analytes were detected between the MDL and the RL in the method blank for batch 110952; these analytes were either not detected in the sample at or above the RL, or detected at a level at least ten times that of the blank. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):
No analytical problems were encountered.

COOLER RECEIPT CHECKLIST

Login#: 18467S Date Received: 2/1/02 Number of Coolers: 1
Client: Mactec Project: Baker Beach

A. Preliminary Examination Phase
Date Opened: 2/1/02 By (print): Peter P. (sign)

1. Did cooler come with a shipping slip (airbill, etc.)? ... YES (NO)
   If YES, enter carrier name and airbill number:
2. Were custody seals on outside of cooler? ... YES (NO)
   How many and where? Seal date: Seal name:
3. Were custody seals unbroken and intact at the date and time of arrival? ... YES NO N/A
4. Were custody papers dry and intact when received? ... (YES) NO
5. Were custody papers filled out properly (ink, signed, etc.)? ... (YES) NO
6. Did you sign the custody papers in the appropriate place? ... (YES) NO
7. Was project identifiable from custody papers? ... (YES) NO
   If YES, enter project name at the top of this form.
8. If required, was sufficient ice used? Samples should be 2-6 degrees C. ... YES NO
   Type of ice: Wet Ice Temperature: No Temperature Blank Per

B. Login Phase
Date Logged In: 2/1/02 By (print): Peter P. (sign)

1. Describe type of packing in cooler: Bubble Wrap
2. Did all bottles arrive unbroken? ... (YES) NO
3. Were labels in good condition and complete (ID, date, time, signature, etc.)? ... (YES) NO
4. Did bottle labels agree with custody papers? ... (YES) NO
5. Were appropriate containers used for the tests indicated? ... (YES) NO
6. Were correct preservatives added to samples? ... YES NO N/A
7. Was sufficient amount of sample sent for tests indicated? ... (YES) NO
8. Were bubbles absent in VOA samples? If NO, list sample Ids below ... YES NO N/A
9. Was the client contacted concerning this sample delivery? ... YES NO
   If YES, give details below.
   Who was called? By whom? Date:
